(57) Abstract			
<p>A photographic self-portrait installation includes a photo-video installation (1) which includes a video camera (2) for viewing a subject and a monitor (10) on which the subject may view a real time self image in background against a foreground of a selection of computer-digitised foreground images. The subject is able to freeze a real time self image against a personally preselected foreground image and generate a composite for printing. The installation may be open or housed within a booth.</p>
